

What is MySecurityVault™ PRO?

MySecurityVault PRO is the answer to protecting yourself against Identity Theft!

MySecurityVault PRO is a secure, encrypted vault where you can safely store almost any type of information, like usernames, passwords, files, documents, spreadsheets, and credit card numbers, without the fear of someone else finding it on your PC.

MySecurityVault's Identity Guard protects you by scanning your PC daily for any personal information that could be used in identity theft and recommends you store it in the vault. With MySecurityVault, you can be reassured that all your private information remains that way!

What PC users don't know but should know

When you visit a site and enter a password, you might think it's hidden, because all you see are asterisks. In fact, often times, this can be easily accessed by any malicious hacker or piece of spyware, because this information is not stored in a secure location. With MySecurityVault, you'll be warned when this occurs, and advised on how to deal with it.

Key Benefits

- The answer to protecting yourself against Identity Theft!
- Provides protection for any kind of data, with drag-and-drop into the vault
- Keeps all your usernames and passwords safe in one secure place
- Protects data stored in the vault with powerful encryption
- Protects your personal data outside of the vault by scanning your PC for vulnerable data, like passwords or bank URLs, that should be stored in a vault
- Quickly takes you from your vault to your favorite website with just a single click

Three levels of Identity Protection

- The Identity Guard protects against identity theft by continually scanning a PC to find instances where identity related information such as usernames, passwords, banking URLs, credit card numbers, etc. are easily accessible and vulnerable to theft. Examples include information entered in AutoFill forms. The Identity Guard alerts you and offers to store the information in its encrypted Security Vault.
- The Security Vault enables you to securely store any type of information in its encrypted vault. MySecurityVault uses RAS encryption technology to protect your data.
 - Usernames
 - Passwords
 - Files
 - Documents
 - Spreadsheets
 - Credit Card numbers
- The Password Manager allows you to not only store usernames in a highly customizable, secure vault, but also provides form filling to reduce time spent filling out web based forms.

MySecurityVault's easy-to-use intuitive interface with built-in tutorial.

System Requirements

- MySecurityVault is designed for Microsoft® Windows® 98, Me, 2000, and XP platforms
