

Donating, discarding, or selling a computer? Permanently eliminate your data first!

Identity thieves target donated, sold, and discarded computers for good reason. Even a single carelessly discarded diskette could contain your entire personal identity.

What is WipeDrive™?

WipeDrive is a security tool that will wipe everything stored on a hard disk, including partition tables, all file data, boot recorder information, and more.

Don't give away your personal information with your old PC. Over the past five years, one in four households was victimized by some type of identity theft. If you do not erase hard drive data before selling or donating your computer, your personal identity or company trade secrets could be stolen.

Deleting a file, partitioning a disk, or formatting will not erase hard drive data. By using WipeDrive, you can securely overwrite and erase ALL of your information, giving you the peace of mind you deserve.

Key Benefits

- Permanently wipes out operating systems, program files, and all file data
- Wipes ALL data from your hard drive
- Verifies that your data has been wiped clean
- Keeps a log of events as you wipe your hard drives that can be imported into Microsoft® Access® and Excel®
- Feature to display specified sectors on the drive
- Contains optional command line parameters that enable the user to wipe hard drives from a DOS batch file
- Supports any size hard drive (IDE or SCSI)
- Wipes all partition tables and drive formats – FAT16, FAT32, NTFS, and Linux
- Listed as an Approved Disk Sanitizing Tool by the U.S. Department of Defense

Key Features

- Supports multiple overwriting erase drive patterns
- Logs all wipe, erase and verify operations including any drive errors
- Boot from a diskette or CD to erase hard drives
- Erase hard drives with optional command line parameters

System Requirements

- WipeDrive is designed for Windows® 3.x, 9.x, Me, NT, 2000, XP, OS/2, PC-based Linux/Unix, and DOS

"WipeDrive is a small price to pay for peace of mind."

Law Office Computing Magazine

"WipeDrive may be the easiest and best file deletion software to reliably delete all of the information on the hard drive of a Windows® based computer. WipeDrive provides a safe way around a serious privacy hazard that arises when companies dispose of old computers."

Ben Ling,
Utah Business Magazine
